

STG Media Systems - Radio In A Box

The STG Radio In A Box Package consists of two easily transported flight cases, one containing a fully prewired 'studio in a box', the other containing ancillary equipment, such as microphones and loudspeakers. Communications with studio headquarters is either via the internet (if a suitable connection is available) or via a 3G modem, making use of the 3G phone network.

The system can be supplied with or without a notebook computer (many customers preferring to supply their own), and the system includes easy to install LUCIE communications software for both internet and 3G connection.

S-Radio broadcast software is also included, with tools for recording, scheduling, production, live assist and automated broadcast. S-Radio is compatible with the SYNERGY software.

Flight Case One contains:

- Professional 8 fader broadcast mixer
- Multi-channel compressor/limiter to control mic levels
- Radio microphone receiver and wireless headphone transmitter
- DJ-Style CD player, remotely controlled from mixer
- Optional telephone balancing unit
- USB audio interfaces to PC
- Optional laptop computer with comms software

Flight Case Two contains:

- Microphones, stands and cables
- Headphones
- Active loudspeakers
- Optional Mic Live indicator
- Mains extension cable on reel
- Loose cables

Perfect for:

- Road-shows
- Promotions
- Outside Broadcasts
- News Gathering
- Interviews

The system ready for transportation

The OB Package set-up and ready to go – about 15 minutes maximum!
